

Custom & Curved Wood

Madrid manufactures a variety of custom and curved wood products. This is not a simply a secondary process of heating, bending and scoring plywood that leaves the wood stressed or compromised. **Instead, we manufacture curved wood using a variety off-the-shelf and custom molds, Madrid manufactures anything from simple to radical three-dimensional wood elements for walls, ceilings and acoustical and diffusion elements.** Our process is cost-effective and our designs are architecturally pleasing.

Madrid's custom and curved wood provides beauty and warmth and can be used as an absorptive or reflective element for sound transmission. Natural wood is affordable and provides design versatility and ease of installation. Madrid's custom and curved wood is available in your choice of rich natural wood veneers. And it delivers the genuine feeling of traditional craftsmanship and quality that Madrid has become known for. Madrid can also provide custom millwork to complete and enhance your overall design.

- Available in a variety of wood choices
- Variety of applications
- Tooling manufactured in-house
- Backed by over 60 years of woodworking experience

Madrid makes you look good.

Method to determine your radius requirements:

Diameter = The distance across a circle through the center

Radius = 1/2 of the diameter or the distance from the center of a circle to any point on the circle

Radius requirements to cover an area =

$$\frac{\left(\frac{\text{Diameter}}{2}\right)^2 + \text{Radius}^2}{\text{Radius}} = \text{Radius needed}$$

About Madrid
